# SQL_LEVEL1

lets add new idea in our program to make the user enter the admin and password ;

hint [user name is = admin];

▼ use sample payload
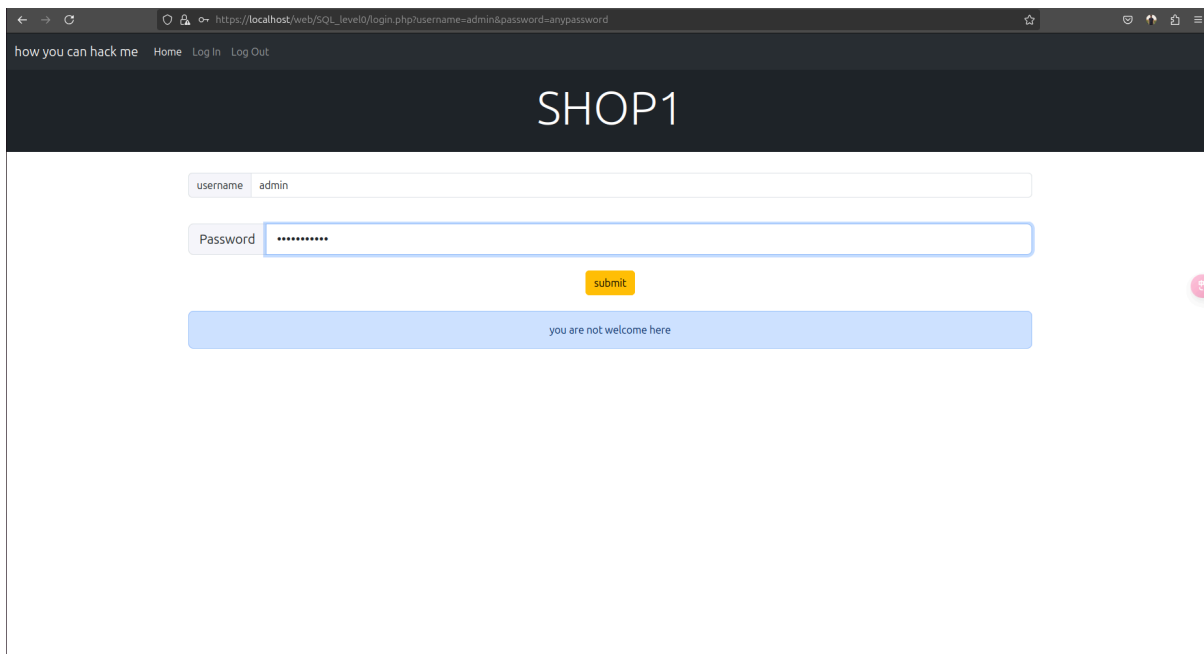

the project now be :

now we have 3 buttons home ⇒ page we are

Log In⇒ lets obtain what is ?

hint user name we know that ⇒ admin

lets try to enter any password:

he give me you are not welcome , know i want to crack this and enter :

i print the sql that send to server to make us more understand what happen:

now you ask why we using ' this character to close the first single quote of user and - -

to commit the remain sql .

▼ stop payload by sample function

-lets create anther page code called test.php

and make loop to stop in each character to check if equal any payload characters of [' or - -]

and if true return you still hacker like that =

and stop ascii-table :

end : the program still have inject lets obtain that in SQL_LEVEL2.
